

CMPS researcher Derek Logan has been awarded 1.9 MSEK from the Natural Science Faculty at Lund University from their infrastructure budget. This grant will finance an increase in the personnel at the [MAX-lab protein crystallisation facility](#), as well as an FPLC system for protein purification that can be used both by the crystallisation facility and by users of the [small-angle X-ray scattering beamline I911-4](#). In combination with an equipment grant received from the Swedish Research Council last year, this paves the way to opening the facility for a larger number of users, and eventually its upgrade to a national status to serve users of [MAX IV](#).
