

Ingemar André receives The Sven and Ebba-Christina Hagberg Prize

Ingemar André, from CMPS, has been awarded this year's Sven and Ebba-Christina Hagberg Prize. He receives the prize for his research within protein design. The award is made of a personal prize as well as financial support, SEK 325 000.

The purpose of the Sven and Ebba-Christina Hagberg Foundation is to stimulate and foster scientific research within the medical and biochemical fields respectively. Each year, an award is made of a personal prize as well as financial support to young researchers who have distinguished themselves in their particular field. The foundation's grant and prize, in alternate years, go to the two different categories of medicine and biochemistry.
